

Chief, Economic Research, ORR

7 January 1959

Chief, Industrial Division, ORR

Monthly Report, December 1958

I. Relations with and Support to Other Components:

A. CIA:

1. The Aircraft Branch was contacted by the Chief, Survey Branch, Physical Security Division, Office of Security for assistance in gathering material for the investigation of possible disclosure of classified material regarding the Soviet aircraft BOUNDER to unauthorized persons.

2. Several persons in the Division were interviewed by a representative of the Lost Documents Branch of the Office of Security regarding their relationships with representatives of [REDACTED]

25X1A5a1

25X1A5a1

3. [REDACTED] (I/GM) made presentations on various current developments in Soviet guided missile production and deployment at the CIA Guided Missile Forum conducted by OSI in December.

25X1A9a

25X1B4d

25X1B4d

4. The Aircraft Branch collaborated with [REDACTED] to produce a paper on BADGER aircraft production. This is the second paper produced where [REDACTED] was used.

25X1B4d

5. Deputy Chief, D/I briefed the Agency Planning Group for Reporting and Communication Systems on the range and variety of the ERA research product, based on sample types of ERA reports. Attention was given to the types of problems addressed by different ERA components, the kinds of sources used in dealing with particular problems, the timeliness of field reporting, and requirements for the recovery of sources from central files.

B. USIB Committees:

6. As a result of Soviet statements made in Geneva, USIB requested that GMIC once again examine the status of the Soviet ICEM program and recommend, if necessary, appropriate changes

SUBJECT: Monthly Report, December 1958

in the current estimate. Research by I/GM indicated that the recent statements did not differ significantly from statements made by the same source more than a year ago, and could have been an extension of published statements by other Soviet officials. In the absence of compelling new evidence from this or any other source, it was recommended that no change be made in the estimate. The OHR evaluation prepared by I/GM was presented to GMIC as the CIA contribution and subsequently became the basis for GMIC's reply to USIB. USIB decided to modify somewhat the conclusions of NIE 11-5-58 by adding a brief statement in NIE 11-4-58 taking account of recent Soviet statements and pointing out the possibility of greater Soviet progress in the ICBM program than that previously estimated as most probable.

7. A working group of the EIC Subcommittee on Machinery and Equipment met with several AFCEM analysts to discuss the Air Force Proposal for a US-USSR exchange in the heavy press field. It is expected that the Subcommittee will make its recommendations to the Ad Hoc Committee on Exchanges in January.

8. At the request of GMIC, I/GM prepared and submitted to the CIA member of GMIC a status report listing and describing all research projects currently underway in OHR in the field of guided missiles.

C. Other: 25X1A9a

9. [REDACTED] (I/ME) discussed certain aspects of Soviet military research, development, testing and evaluation expenditures as reflected in the OHR contribution to NIE 11-4-58, IP-643, with an interservice group chaired by Col. Deverall of the Joint Staff and with Mr. Walsh and Comdr. Inman of the Staff of the Assistant Secretary of Defense (Comptroller). The purpose of these discussions was to assist the services in the Joint Staff context in developing an estimate of Soviet research and development with particular reference to guided missiles and space. Eventually the services, particularly the Navy and the Air Force withdrew from the exercises. We refused to permit

our participation to be construed as CIA concurrence in the final product on the basis of the fact that the appropriate channels for obtaining such concurrence would have to include GMIC, ONE, the Board of National Estimates and the USIB.

10. Chief, D/I and members of I/GM and I/ME spent several days discussing various aspects of military expenditures and guided missile production and deployment in the USSR with Mr.

25X1X7 [redacted] He has recently taken on a part-time responsibility for guided missile intelligence [redacted] and 25X1X7 will attend the [redacted] Although

25X1X7 [redacted] is not yet in a position to contribute much new 25X1X7 substantive information, it is possible that he will prove to be a valuable contact in the future, particularly in substantive areas of [redacted] specialization, such as the Soviet 25X1X7 Arctic.

25X1A9a11. [redacted] (I/PE) acted as interpreter at an interview between "Yuriy" Zhukov, Chairman of the USSR State Committee for Cultural Exchanges with Foreign Countries, and Dr. Raymond Saulnier, Chairman of the President's Council of Economic Advisors.

12. [redacted] 25X1A5a1  
25X1A5a [redacted] reviewed Soviet developments in ceramic tooling and electrolytic methods of metalworking with members of I/PE in December 1958. [redacted] concluded 25X1A5a1 that the USSR, under pressure to conserve alloying elements has developed ceramic cutting techniques to a stage more advanced than that of the US.

25X1A9a13. [redacted] (I/PE) attended several meetings of an interagency technical group which is considering export control of technical data.

## II. Changes in Estimates:

14. The only significant change in an estimate within D/I's responsibility is described in paragraph 6 above.

## III. Future Plans:

15. The continuing necessity of direct support to field collection programs was again highlighted during December by the decision to renew [redacted] IDY assignment to [redacted]

25X1A6a

25X1A9a

for 45 days. On the basis of [redacted] first hand and detailed description of the manner in which the [redacted] inter- 25X1A6a  
rogations are conducted, the local problems encountered in dealing  
with [redacted] and sources, and the unanticipated 25X1A6a  
flow of guided missile information from "casual" sources, it  
was considered essential that an OMR missile specialist provide  
on-the-spot guidance during the interrogations scheduled prior  
to [redacted] arrival in early February on PCS assignment. 25X1A9a  
The alternative was risk losing, without possibility of recall,  
sources who probably possess unique guided missile information.

16. OMR has been requested by OMIC to prepare and present  
on behalf of the U.S. Delegation the formal paper on Soviet 25X1X7  
guided missile production for the forthcoming [redacted]  
[redacted] OMR has also been assigned responsibility 25X1X7  
for making the U.S. reply to the paper to be presented by [redacted] 25X1X7  
on Soviet guided missile deployment. Chief, I/OM will attend  
the conference and present the paper and reply. Preparation of  
the production paper has begun in I/OM and it is hoped that the  
paper will be adaptable for formal publication, probably by OCI,  
as a Part III of the Weekly Review. The extent to which a  
meaningful paper can be prepared and discussed at the conference  
will be largely dependent upon release by DD/P of a large volume  
of reports currently classified Secret/NOFORN. This is currently  
being negotiated with DD/P through St/C channels. 25X1A5a1

25X1A5a1

17. In accordance with a suggestion made by [redacted]  
[redacted] D/I Consultant (see I. C. above), I/PE is working on  
plans to exploit U.S. industrial firms in the evaluation of  
Soviet open source literature on those sections of the machine  
building industry on which I/PE lacks analytical capability. 25X1A5a1

25X1A5a1

[redacted] offered the services of the [redacted]  
[redacted] in analyzing Soviet material  
on ceramic tools and electrolytic methods of metalworking. Under  
[redacted] proposal unclassified literature would be sent  
to his company at quarterly intervals for written evaluation. 25X1X71

25X1A5a1

18. The exchange of cables on [redacted] 25X1X7  
Conference between OMR and its representative [redacted] was  
discussed with representatives of OSI. [redacted], Deputy Chief, 25X1A9a  
ED/OSI, was informed that no further action by OMR was contem-  
plated, and that the conference schedule as previously drawn up  
would still be adhered to. [redacted] will 25X1A9a  
attend the [redacted]  
between 12 and 23 January, 1959. 25X1X7

25X1X7

SUBJECT: Monthly Report, December 1958

IV. Problems:

19. As a result of the increasing number of self-initiated projects which are becoming over-due, the Industrial Division has reviewed its entire research program for the rest of FY 1959. The review included a detailed examination of each of the projects currently programmed. In the process it was found that extensive revision of this program was necessary, and such changes in the Division's research program have been recommended for approval by Chief, Economic Research.

At a meeting of the Branch Chiefs, it was emphasized that the importance of meeting even these self-imposed due-dates should be taken very seriously. It was evident that the major problem was the scheduling of analysts' time through the year. In order to solve this persistent problem, a pilot program of detailed scheduling of time of each analyst has been initiated to determine its effectiveness and its appropriateness for use in formulating and administering the FY 1960 research program.

20. Although progress has been made in obtaining informally advance copies of Signal Corps (USASIA) contributions to the electronics equipment subsections of the Soviet Bloc MIS, for branch review, the quality of these contributions is still mediocre, their review absorbs excessive ERA time, and their revision by the originating agency prejudices the meeting of the deadline to OBI. This condition is believed to reflect the limited analytical potential of USASIA rather than a reluctance on its part to be cooperative.

21. The following is a direct quote from I/GM's monthly report concerning a logistics problem which has defied solution:

"There has been another significant new development in the working conditions under which research of the utmost significance to the national security is conducted in this Branch. For some time, the hum of priority activity by busy, contented analysts has been augmented by the atonal roar of a battery of the highest-powered machines the electronics industry can devise which has been installed in the CIA Watch Office directly overhead. More recently, the floor of the Office of the Chief, I/GM has buckled and come asunder to the accompaniment of a jet of escaping steam from the main Cafeteria pipes. Whereas we were gradually becoming adjusted to being set upon from all sides, it now appears that we are equally vulnerable from above and below as well!"
